PROFILE

Computer Science graduate and R&D Data Analyst at Cartrack, a global vehicle telematics company. I build production dashboards, automated reporting and machine learning systems (computer vision, natural language processing and speech) on multi-region PostgreSQL data. Looking to grow further into applied machine learning and data science roles.

EXPERIENCE

R&D Data Analyst | Cartrack *Jan 2026 – Present*

- Selected to join the Business Intelligence & Automation team within Cartrack's Research & Development division.
- Automated and deployed business-critical reports (daily stock, global operations, churn and retention, hardware health, product adoption), cutting manual reporting time while maintaining accuracy.
- Designed and maintain production Grafana dashboards in Python and SQL for stock, delivery and operational performance, including the Stock Delivery Dashboard, built from the ground up for end-to-end visibility of stock movement.
- Built the Delivery Product Dashboard (commissions, activity and KPIs) and the Mining Division Dashboard for data-driven performance monitoring.
- Delivered production-ready machine learning systems (see Projects) plus a support-ticket classifier to the software team for integration.

Private Tutor | Tutor Doctor *Aug 2024 – May 2025*

- Tutored Grade 1 to Grade 12 students in Afrikaans, IT and Mathematics, adapting my approach to each learner.

Student Representative Council Member | Belgium Campus iTversity *2023*

- Coordinated campus events, managed clubs and represented the institution to prospective students on open days.

PROJECTS

Vehicle Identification Number Extraction, Vision-Language Model

- Built a production vision-language pipeline that reads Vehicle Identification Numbers from field photographs, combining plate detection, OCR, geometric correction and manufacturer-aware validation to handle dirty, angled or poorly lit images.
- Includes automatic character-confusion correction and a vision-language model cross-check for cases the classical pipeline cannot resolve, with results reconciled in a multi-tab Excel export. Delivered to the software development team for production integration.

Speech-to-Text Call Analysis Platform

- Built an end-to-end pipeline that transcribes bilingual (English and isiZulu) customer calls with Whisper, then uses large language model passes for speaker labelling, hallucination detection, summarisation and insight extraction, surfaced in a Streamlit dashboard for call review and quality auditing.
- Achieved 92% speaker-identification accuracy and benchmarked transcription error rates against hand-verified transcripts, producing clean training data for a custom speech model.

Autonomous Trading Agent

- Built an AI agent that trades on prediction markets 24/7, using a secure proxy-wallet design on the Polygon blockchain and deployed on a cloud VM.

Generative Agent-Based Modelling | Final-Year Dissertation

- Applying AI agents to simulate socio-economic behaviour in the Gauteng City-Region, using GraphRAG and Gauteng City-Region Observatory survey data within a POPIA-compliant framework.

EDUCATION

BSc Computer Science | Belgium Campus iTversity *2023 – Present*

Matric | High School Eduplex *2018 – 2022*

CERTIFICATIONS

- Kaggle: Python, Pandas, Intermediate Machine Learning

SKILLS

Languages: Python, SQL
Machine Learning & Data: NLP, Computer Vision, Speech Recognition, Large Language Model Applications, Predictive Modelling, Feature Engineering, Model Evaluation, Data Analysis
Tools & Platforms: Grafana, PostgreSQL, Pandas, Streamlit, PyTorch
Spoken Languages: English, Afrikaans, receptive knowledge of Dutch
References: Available on request.
